

SYSTEM ANALYSIS AND DESIGN

Individual Assignment: Professional Portfolio Website

Assessment Weight	50%	Duration	2–3 weeks
Mode	Individual	Submission	Website + SAD report

1. Assignment Purpose

Design, develop and publish a professional personal portfolio website that can be used when applying for internships, employment and other professional opportunities. The assignment allows you to practise System Analysis and Design (SAD) while creating a career asset that can be continuously updated after the module.

2. Learning Outcomes

- identify a real problem, users, objectives, scope and system requirements;
- model a small information system using appropriate SAD diagrams;
- translate requirements and designs into a usable software product;
- test, deploy and professionally present a working system; and
- reflect on how the portfolio supports career development.

3. Portfolio Content Requirements

The portfolio must be professional, accurate, mobile-responsive and easy to navigate. Include:

Section	Minimum expected content
Home	Name, professional title, short introduction and clear navigation.
About Me	Professional summary, interests and career objective.
Education	Degree, institution, relevant coursework and academic highlights.
Skills	Technical and soft skills presented honestly and clearly.
Projects	At least three projects with problem, contribution, tools, screenshots and links where available.
Experience & Activities	Internships, volunteering, leadership, competitions or relevant achievements.
CV	View or download an updated professional CV in PDF format.
Contact & Links	Professional email and links to LinkedIn and GitHub or another relevant platform.

4. Recommended Technology Stack

Keep the solution achievable within the given period. A database or backend is not required.

Area	Recommended options
Core development	HTML5, CSS3 and JavaScript
Styling — choose one	Plain CSS, Bootstrap or Tailwind CSS
Optional framework	React or another familiar front-end framework; use only if you can complete it confidently
Design	Figma, Canva or hand-drawn wireframes converted into a clear digital submission
Version control	Git and GitHub

Free deployment	GitHub Pages, Netlify or Vercel
-----------------	---------------------------------

5. Connection to System Analysis and Design

SAD stage	Evidence required in this assignment
Planning	Problem statement, objectives, stakeholders, scope and constraints.
Analysis	Functional and non-functional requirements; simple requirements specification.
Modelling	Use-case diagram with brief descriptions and one activity diagram showing a key user flow.
Design	Site map/navigation structure, low- or high-fidelity wireframes, and interface design decisions.
Implementation	Develop the portfolio according to the approved requirements and design.
Testing	Test content, navigation, links, responsiveness, accessibility basics and browser behaviour.
Deployment	Publish the website and evaluate whether it meets the original objectives.

6. Required Deliverables

- A working, publicly accessible portfolio website URL.
- A GitHub repository URL containing the source code and a short README.
- A concise SAD report (approximately 5–8 pages excluding appendices) containing: problem and objectives; stakeholders, scope and requirements; use-case diagram; activity diagram; site map; wireframes; test table; and a short reflection.
- An updated CV included in the portfolio.
- Career-sharing evidence: screenshot of a LinkedIn post or the portfolio added to the LinkedIn Featured section.

7. Suggested Three-Week Work Plan

Period	Focus	Expected progress
Week 1	Plan and analyse	Define objectives and scope; gather content; write requirements; prepare diagrams, site map and wireframes.
Week 2	Design and develop	Build the pages, add portfolio content, apply responsive design and maintain the GitHub repository.
Week 3	Test and publish	Test and improve the website; deploy it; finalize the report, CV and career-sharing evidence.

8. Evaluation Criteria — Total: 50 Marks

Criterion	Marks
Problem, objectives, stakeholders and scope	4
Functional and non-functional requirements	5
Use-case diagram and brief use-case descriptions	5
Activity diagram, site map and wireframes	6
Portfolio content quality and professional presentation	7

Functionality, navigation and responsive interface	8
Code quality, structure and GitHub usage	4
Testing evidence and improvements	4
Deployment and working links	3
Reflection on career value and SAD learning	2
LinkedIn/Featured-section evidence or approved alternative	2
TOTAL	50

9. Submission Instructions

- Submit the SAD report as one PDF file through the designated learning platform.
- Include the live website link and GitHub repository link on the first page of the report.
- Submit before the announced deadline. All links must remain accessible during evaluation.
- Use only content, images and code that you have permission to use. Cite external templates, libraries and assets.
- AI tools may support learning and debugging, but students must understand, verify and be able to explain every submitted element. Any required AI-use declaration must be included.

10. Important Notes

The portfolio is expected to remain useful after assessment. Marks are awarded for applying SAD principles and producing a functional professional portfolio—not for social-media likes, comments or reach. Students must protect personal privacy and should not publish sensitive information.
